The question: What do I do first?

The answer might well be this simple: **Planning Session**

All good websites come from a good plan. Sounds redundant, but it's true. If you want to create a good and solid website, you need a good and solid plan. I know it's hard to do, and I know you want to keep poking and playing with this exciting program, but it is time to take a break away from your computer and turn to the old paper and pencil. That's right, we're going back in time to when people actually wrote things down .

Answer the following questions:

What am I going to do with this?

Who is going to read this?

What kinds of information will I be posting?

Why am I doing this?

Who am I doing this for?

How often am I going to be posting and adding information?

Why are we doing this?

Because I've spent 20 years building websites, and would love to talk to you about it.

I hope that you have found your own "Internet Guy"
